Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This shows a rat transforming growth factor-beta (TGF-beta) binding protein designated rBEER. The cDNA and protein may be used for prevention, treatment and diagnosis of diseases associated with dispropriate BEER expression. For example, they may be used to treat disorders associated with decreased TGF-beta BP expression. The cDNA or vectors may be administered to treat diseases by rectifying mutations or delations in a patient's genome that affect the activity of BEER by expressing inactive proteins or to supplement the patients own production of BEER polypeptides. The nucleic acids may be used for recombinant production of BEER, gene therapy, antisense therapy, as probes for altagnostic assays and for functional studies. BEER may be used to raise antibodies and for identification of BEER modulators. BEER antagonists may be used to increase bone mineral content for the treatment of disorders such as ostopenia, osteoporosis, fractures and other disorders

Nucleic acids (I) encoding a transforming growth factor beta binding protein, useful for identifying agents for treating osteopenia, osteoporosis and fractures
                                                                                                                            Claim 5; Page 124; 162pp; English.
```

This shows a murine transforming growth factor-beta (TGF-beta) binding protein designated mBEER. The cDNA and protein may be used for prevention, treatment and diagnosis of diseases associated with inappropriate BEER expression. For example, they may be used to treat disorders associated with decreased TGF-beta BP expression. The cDNA or vectors may be administered to treat diseases by rectifying mutations or deletions in a patient's genome that affect the activity of BEER by expressing inactive proteins or to supplement the patients own production of BEER polypeptides. The nucleic acids may be used for recombinant production of BEER, gene therapy, antisense therapy, as probes for aliagnostic assays and for functional studies. BEER may be used to raise antibodies and for identification of BEER modulators. BEER antagonists may be used to increase bone mineral content for the treatment of disorders such as osteopenia, osteoporosis, fractures and other disorders associated with low mineral content.

Submitted (SEP-1998) to the EMBL/GenBank/DDBJ databases.

Submitted (SEP-1998) to the EMBL/GenBank/DDBJ databases.

1- FUNCTION: PROMOTES SPERMATOGENESIS AND OVULATION BY STIMULATING THE TESTES AND OVARIES TO SYNTHESIZE STEROIDS.

1- SUBUNIT: HETERODIMER OF A COMMON ALPHA CHAIN AND A UNIQUE BETA CHAIN WHICH CONFERS BIOLOGICAL SPECIFICITY TO THYROTROPIN, LUTROPIN, FOLLITROPIN AND GONADOTROPIN.

1- TMITARITY: BELONGS TO THE GLYCOPROTEIN HORMONES BETA CHAIN

BEER may be used to raise antibodies and for identification of BEER modulators. BEER antagonists may be used to increase bone mineral content for the treatment of disorders such as osteopenia, osteoporosis, fractures and other disorders associated with low mineral content.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    vectors may be administered to treat diseases by rectifying mutations or deletions in a patient's genome that affect the activity of BEER by expressing inactive proteins or to supplement the patients own production of BEER polypeptides. The nucleic acids may be used for recombinant production of BEER, gene therapy, antisense therapy, as probes for diagnostic assays and for functional studies. BEER may be used to raise
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This shows a bovine transforming growth factor beta (TGF-beta) binding protein designated bBEER. The cDNA and protein may be used for prevention, treatment and diagnosis of diseases associated with inappropriate BEER expression. For example, they may be used to treat disorders associated with decreased TGF-beta BP expression. The cDNA or
Nucleic acids (I) encoding a transforming growth factor beta binding protein, useful for identifying agents for treating osteopenia, osteoporosis and fractures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 7;
                                                                                                                                                                                                                                           Brunkow
                                                                                                                                                                                                                                                                                                                                                                                                                  24-NOV-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     vectors may be administered to treat diseases by rectifying mutations or deletions in a patient's genome that affect the activity of BEER by expressing inactive proteins or to supplement the patients own production of BEER polypeptides. The nucleic acids may be used for recombinant production of BEER, gene therapy, antisense therapy, as probes for diagnostic assays and for functional studies. BEER may be used to raise antibodies and for identification of BEER modulators. BEER antagonists may be used to increase bone mineral content for the treatment of disorders such as osteopenia, osteoporosis, fractures and other disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This shows a vervet transforming growth factor beta (TGF-beta) binding protein designated vBEER. The cDNA and protein may be used for prevention, treatment and diagnosis of diseases associated with inappropriate BEER expression. For example, they may be used to treat disorders associated with decreased TGF-beta BP expression. The cDNA or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 4; Page 122-123; 162pp; English

Result

score greater i

greater than derived by a

the number of results predicted by chance to have a r than or equal to the score of the result being printed,

analysis of the total score distribution.

The cDNA and protein may be used for prevention, treatment and diagnosis of diseases associated with inappropriate BEER expression. For example, they may be used to treat disorders associated with decreased TGF-beta BP expression. The cDNA or vectors may be administered to treat diseases by rectifying mutations or deletions in a patient's genome that affect the activity of BEER by expressing inactive proteins or to supplement the patients own production of BEER, gene therapy, antisense therapy, as probes for alagnostic assays and for functional studies. BEER may be used to raise antibodies and for functional studies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                antibodies and for identification of BEER modulators. BEER antagonists may be used to increase bone mineral content for the treatment of disorders such as osteopenia, osteoperosis, fractures and other disorders associated with low mineral content.

It was isolate from a human kidnay cDNA library containing exons 1 and 4 of the sequence. HDCR6 is closely related to the DAN and DCR5 proteins, both which act as antagonists of morphogenic proteins such as BMP. It is possible that the hDCR6 gene and protein can be used as immunogens, modulators of cell function, growth and differentiation, to reduce undesirable bone formation, to identify DCR6 binding agents, in diagnosis, and in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; DNA/Cerberus-related protein antagonist; BMP; cell growth; cell d gene therapy; ss.
